## MORINGA

Sustainability profile

- Moringa Oleifera is a tree that is highly adaptable to climate change for its resistance to drought. It grows easily and fast in nutrient poor soil.
- The water footprint of Moringa crop is smaller than other crops: the estimated quantity for Moringa's irrigation is 4183 m3/y/ha which is 2 to 4 times less than for other vegetables.
- No waste! All parts of Moringa can be used:
  - Leaves (food supplement)
  - Seeds (oil for hair and skin care and as food ingredient)
  - Branches (livestock feed)
  - Cake obtained from pressing the seeds (used as green manure)
