

# Primus Vital

NATURAL SCALE PROTECTION WITH  
CONNECTED APPLICATION

- **Effective protection against limescale.**  
No use of chemicals, while preserving natural water quality.

- **Additional corrosion protection :** Oxygen activation promotes the formation of a protective layer in the pipes.

- **A pure taste experience!**  
Refining drinking water through vitalization using the vorter effect and the principle of magnetization

- **Long-term plant protection :**  
The combined protection against limescale and corrosion prevents damage to the system and water heaters, as well as energy transfer losses.

- **Practical and economical:**  
Simple installation with no need for wastewater connection, low power consumption.

Spring water

Water destroyed after passing through the pipes

Water revitalization

#### Natural drinking water quality

As crystal analyses by the Hagalis Institute in Überlingen show, vitalised water has structures similar to those of natural mountain spring water.

**EFFICIENT, RELIABLE AND DURABLE.**

## THE ECOLOGICAL REVOLUTION IN WATER TREATMENT

- **Energy optimization:** Limitation of heat transmission losses due to limescale
- **Combined solution:** Protection against limescale and corrosion
- **Preservation of natural water quality**
- **No chemicals**
- **Water revitalization**
- **Connected technology**

MAYITREATMENT

INNOVATION IN WATER TREATMENT

Natural protection against limescale with drinking water revitalization.

# Primus vital

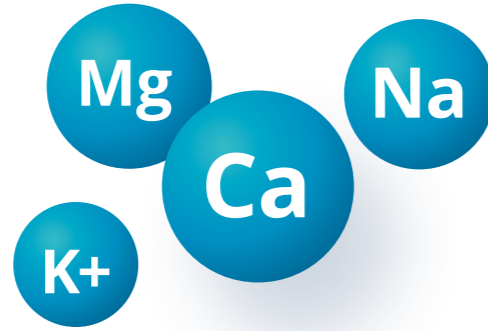

## ELEMENTAL & PRECIOUS OUR WATER.

### EXPERIENCE PROTECTION AGAINST LIMESCALE : PRIMUS VITAL.

Hard water contains a high concentration of minerals such as calcium and magnesium, which are good for your health. But for your domestic installation and your energy balance, these minerals carry risks. When heated, they cause limescale deposits that can lead to damage and massive losses in energy transmission.

These risks can be avoided thanks to the natural anti-scale protection system.

**Primus Vital.** Unlike softening systems, the natural quality of the water remains intact and is improved, even refined.

Natural protection against limescale. Pure pleasure.

**Primus Vital** offers unique water treatment with triple added value:

- Effective scale protection
- No chemical additives
- Without altering the natural quality of drinking water. On the contrary: it's even more refined, because the vitalizer activates the oxygen in the water.

## FOR VALUE CONSERVATION AND PROTECTION OF EXISTING

### PREVENT DAMAGE AND ENSURE ENERGY EFFICIENCY.

**Primus Vital** protects your home from limescale build-up in an environmentally-friendly way. The polarity of the mineral crystallization process is reversed, so that limescale is simply removed by the water flow. The formation of deposits is almost completely prevented. This protects pipes and water heaters in the long term, and helps prevent water damage and repair costs. As limescale deposits lead to massive losses in energy transmission, investing in an anti-limescale system also contributes to energy optimization in your household.

Thanks to the additional activation of oxygen, water quality is not only preserved, but also refined. With **Primus Vital**, the formation of a protective layer in the pipes is promoted, which also protects you against the risk of corrosion.

You benefit from purified drinking water while protecting your installations.

A layer of limescale of just 3 mm on a heating element already results in heat transmission losses of around 20%.

## RELY ON SUSTAINABLE VALUES.

### TAKE ADVANTAGE OF PREMIUM WATER.

**Primus Vital** offers you triple added value in a combined solution.

- Preserve and refine the natural quality of drinking water.
- Effective protection against limescale to optimize energy use and protect the system.
- Prevent the risk of corrosion by forming a protective layer in the pipes.
