

FERTHUMIC

PLANT BIOSTIMULANT WITH HUMIC ACIDS

Combination of humic and fulvic acids enriched with seaweed extracts and EDTA micro elements

COMPOSITION (%w/w)

Total Nitrogen (N)	2%
Organic Nitrogen (N)	2%
Water-soluble potassium oxide (K ₂ O)	2.7%
Organic Matter	17%
Total humic extracts	20%
Amino acids	7.5%
Water-soluble Iron (Fe)	0.05%
Iron (Fe) chelated with EDTA	0.05%
Water-soluble Manganese (Mn)	0.03%
Manganese (Mn) chelated with EDTA	0.03%
Water-soluble Zinc (Zn)	0.02%
Zinc (Zn) chelated with EDTA	0.02%

FERTHUMIC is a liquid fertilizer with humic acid from American Leonardite, fulvic acids and enriched with seaweed and micro nutrients completely chelated by EDTA. The synergism between the seaweed and the humic substances help enhance the soil's cation exchange capacity in order to obtain better results at a physical, chemical and biological level. Its application is linked to key moments such as leaf formation and development, pre-flowering, fruit set, bulb enlargement, bud formation, and any stress condition that may occur during the crop development.

Allowed in
BIOLOGICAL
AGRICULTURE

DOSAGE AND METHODS OF USE	CROPS	APPLICATION	DOSE
FERTIGATION	Fruit Horticultural Floricultural Industrial	2-4 Throughout the cycle	20-25 l/ha

Warnings: Shake the product well before use. For any mixtures with other products, make preliminary tests. Observe the dosages shown. The product is not combustible and is stable at ordinary temperatures and pressures. Store the product in adequately ventilated rooms at temperatures between + 5 ° C and + 35 ° C.

FORMULATION

Soluble liquid
